1 Introduction

The Bicycle Rental Platform is a proposed web-based solution to offer an efficient, eco-friendly, and health-promoting multi-branch bicycle rental service. Users will be able to easily rent a bicycle from one branch and return it to any other connected branch across the city, with all transactional and inventory data managed via a centralized database. This project directly addresses SDG Goal 3 (Good Health and Well-being) by promoting physical activity and reducing air pollution from motor vehicles, and SDG Goal 8 (Decent Work and Economic Growth) by creating new employment opportunities in maintenance, operations, and platform management, while fostering sustainable local economic activity. The system will leverage modern web technology and a robust database to ensure scalability and a seamless user experience.

2 Background

2.1 The Problem

Urban centers often face challenges related to traffic congestion, poor air quality, and sedentary lifestyles. Current short-distance transportation options are often costly, polluting, or inconvenient. Furthermore, the lack of innovative, local enterprises inhibits the growth of a sustainable economy and the creation of decent work.

2.2 Solution

- **SDG 3 (Good Health and Well-being):** Cycling is a proven method for physical fitness and mental well-being. By making bicycles easily accessible and a convenient mode of transport, the platform encourages an active lifestyle. Additionally, promoting non-motorized transport contributes to reducing air pollution, a major health risk.
- **SDG 8: (Decent Work and Economic Growth):** The establishment and scaling of a multi-branch bicycle rental network will create various employment opportunities, including:
    1. Branch Managers and Customer Service staff.
    2. Bicycle Mechanics and Maintenance Technicians.
    3. Web Developers and Database Administrators.
    4. Logistics Personnel for bicycle redistribution between branches. This creates a new, sustainable business model for local economic growth.

The proposed system's key differentiator the flexibility of **renting and returning to any branch** solves a major inconvenience of single-branch rental models, thus promoting widespread adoption.

3 Core Features

1. **User Authentication:** Secure registration and login for all users.
2. **Branch and Bike Availability:** Real-time display of bicycle availability at all branches via an interactive map.
3. **Booking and Payment:** Online booking for a specified time and seamless payment integration.
4. **Multi-Branch Return:** The system will track a bicycle's location, allowing a customer to return it to the same branch or any other connected branch.
5. **Data Management:** A robust central database (e.g., MySQL, PostgreSQL) will store all critical data:
    - User profiles and rental history.
    - Real-time bike inventory and location status (Available, Rented, Under Maintenance).
    - Branch locations and capacity.
    - Transaction and payment records.
6. **Admin Panel:** A dashboard for branch managers and central administration to:
    - Monitor real-time fleet status and location.
    - Manage user accounts and transactions.
    - Generate reports on usage, revenue, and maintenance needs.

5 Resources

Resources	Specific Resources	Role
Human Resources	Project Manager (1)	Overall project oversight, stakeholder communication, and timeline management.
	Full-Stack Developer (2)	Website and Admin Panel development (Frontend/Backend).
	Database Administrator (1)	Database design, security, maintenance, and query optimization.
	UX/UI Designer (1)	Ensuring a user-friendly and intuitive interface.
Technical Resources	Web Hosting & Domain	**Reliable cloud hosting** (e.g., AWS, Azure, Google Cloud) and a memorable domain name.
	Database Software	Open-source **relational database** (e.g., PostgreSQL or MySQL).
	Version Control	**GitHub** for collaborative development and code management.
	Payment Gateway	Integration with a secure, local online **Payment Gateway**.
Physical Resources	Bicycle Fleet	Purchase and maintenance of a durable, identifiable fleet of bicycles.
	Branch Locations	Secure, accessible docking or designated parking areas at initial branch locations.

Table 1: Project Resources

6 Conclusion

The Bicycle Rental Platform is a timely and strategically sound project that aligns local economic development with global sustainability goals. By providing a convenient, flexible, and health-conscious transportation alternative, the platform not only offers a scalable business model but also makes a tangible contribution to **Good Health and Well-being (SDG 3)** and **Decent Work and Economic Growth (SDG 8)**. We are confident that with the outlined plan and resources, this project will become a blueprint for sustainable urban mobility.
